ABSTRACT

Average salary increases for 551 faculty in secretarial and related programs are reported for 1982-1983 and 1985-1986, as part of the College and University Personnel Association's annual faculty salary studies. Included are comparative data for 108,074 faculty at 174 public colleges and 193 private colleges, representing 41 academic disciplines. In 1982, 44 public colleges and 20 private colleges reported on salaries of secretarial science faculty, while 55 public and 22 private colleges reported in 1985. Between 1982 and 1985, average salaries of faculty in this field increased 17.6% at public colleges and 30.5% at private colleges. The average salary for faculty in secretarial and related programs was below the average faculty salary in the other 40 disciplines (9% below for public colleges and 23% below for private colleges). Included is information on: the number of faculty by academic rank, including new assistant professors; salaries by academic rank; the ratio of average salaries to total average salaries of all public and private colleges in both years studied; comparisons between the 2 years and with the Consumer Price Index of changes in cost-of-living; and comparisons with 40 other disciplines. The disciplines and participating institutions are listed. (SW)

SALARY-TREND STUDY OF FACULTY IN SECRETARIAL AND RELATED PROGRAMS FOR THE YEARS 1982-83 AND 1985-86

Richard D. Howe and Sidney W. Eckert

Since 1982-83 the College and University Personnel Association (CUPA) in Washington, D.C., in cooperation with Appalachian State University in Boone, North Carolina, has conducted annual national faculty salary studies by discipline and rank each year through 1985-86. Each year two separate studies are conducted, one for public senior colleges and universities which are members of the American Association of State Colleges and Universities (AASCU) in Washington, D.C., and the other for private senior colleges and universities. The list of private institutions is provided by the American Council on Education in Washington, D.C.

Salary data for each study were collected and tabulated for full-time teaching faculty in 41 selected academic disciplines including secretarial and related programs. The disciplines were chosen from among those defined by the Higher Education General Information Study (HEGIS) Taxonomy and by A Classification of Instructional Programs (CIP), 1981. The definition of the discipline/major field of secretarial and related programs in the CIP is as follows:

> An instructional program that generally prepares individuals to record and transcribe communications and to abstract, classify, and file information.

This article presents a summary of the overall average salary increases in the discipline/major field of secretarial and related programs from the "baseline year" of 1982-83 to and including the "trend year" of 1985-86 for both public and private institutions. Of the 227 institutions which participated in

HE019764

Richard D. Howe
2 Appalachian State Univ TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)."

CUPA's PUBLIC (AASCU) study of 1982-83, 174 also participated in 1985-86. Data from those same 174 institutions were used in both the baseline year and the trend year. Of the 299 institutions which participated in CUPA'S PRIVATE study of 1982-83, 193 also participated in 1985-86. Data from those same 193 institutions were used in both the baseline year and the trend year.

In addition to listing the average salaries in the secretarial and related programs for both public and private participating institutions by rank, including "new assistant professor," and listing the faculty mix percentage (FAC MIX PCT) and the salary factor, comparisons are made between the two studies for each of the two study years (1982-83 and 1985-86) and with the CPI (Consumer Price Index) of changes in cost-of-living.

The CPI is based on prices of food, clothing, shelter and fuels, transportation, medical care, entertainment, and other goods and services that people buy for day-to-day living. In examining trends in faculty salary it is important to consider any changes in the economy and the CPI yields a more precise representation of "real" salary increases over time.

The salary is based on a nine- or ten-month academic year salary of full-time faculty only. It does not include any faculty members teaching less than 51 percent. Salary for summer academic work, fringe benefits, and perquisites are not included in the salary data. The average salary is based on the study information with the assumption that all employees were full-time. The average salary displayed is an average of all faculty salaries reported for a given rank and discipline.

The "NUM" means the number of faculty members whose salaries were included to compute the average salary.

The "N/IN" means the number of institutions that reported salary data for a given academic rank and discipline/major field.

The FAC MIX PCT is the percentage of faculty in a given discipline/major field who hold a given academic rank. For example, a FAC MIX PCT factor of .25 for associate professor of the secretarial and related programs in the 1982-83 public study means that 25 percent of the faculty in that discipline/major field hold the rank of associate professor.

The SALARY FACTOR for a given rank of a given discipline/major field is the ratio of the average salary to the total average salary of all institutions in each of the four studies: PUBLIC 1982-83, PUBLIC 1985-86, PRIVATE 1982-83 and PRIVATE 1985-86. For example, a SALARY FACTOR of .98 for assistant professors in the discipline/major field of secretarial and related programs in the 1982-83 public study means that their salaries are 2 percent lower than the average of all assistant professors in all institutions in that study.

NEW ASST PROF is the grouping of assistant professors who were hired for the first time in the fall of the study year (1982-83 or 1985-86). All information for this group was included in the ASST PROF group for reporting purposes. This group is used mainly for new hiring information.

ALL MAJOR FIELDS is the entire data base for all 41 disciplines/major fields in each of the four studies. It is used to compare, among other things, the discipline/major field of secretarial and related programs with the entire data base for each study.

Of particular import to the reader is noting the size of the sample on which each percentage or dollar value is based. The smaller the number in the group, the greater the effect of extreme scores on a descriptive statistic such as the average. It should be noted also that any large disparity in the sample sizes between the "baseline year" of 1982-83 and the "trend year" of 1985-86 will lessen the reliability and validity of any conclusions that one might make based on a simple comparison of averages.

RESULTS OF THE TWO PUBLIC (AASCU) STUDIES, 1982-83 AND 1985-86

In the PUBLIC 1982-83 salary study in the above table, the reader may note that the discipline/major field of secretarial and related programs was reported in 44 of the 174 public (AASCU) institutions. The average salary of the 194 faculty was $24,459. This average salary was approximately 7 percent (0.93) lower than the average salary of $26,376 for all 35,137 faculty in ALL MAJOR FIELDS in the 1982-83 public study.

In the PUBLIC 1985-86 salary study in the above table, the discipline/major field of secretarial and related programs was reported in 55 of the same 174 public (AASCU) institutions. The average salary of the 262 faculty was $28,755. This average salary was approximately 9 percent (0.91) lower than the average salary of $31,610 for all 39,815 faculty in ALL MAJOR FIELDS in the 1985-86 public study.

The increase in average salaries for all faculty in the secretarial and related programs after three years in the public institutions studied was 17.6 percent ($28,755 minus $24,459 equals $4,296). The CPI of increased cost-of-living between October 1982 and October 1985 was 10.7 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 6.9 percent or 2.3 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the public institutions studied was 19.8 percent ($31,610 minus $26,376 equals $5,234). In comparison to the discipline/major field of secretarial and related programs (17.6%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 2.2 percent (19.8% minus 17.6% equals 2.2%) more than faculty in the discipline/major field of secretarial and related programs.

Although the discipline/major field of secretarial and related programs is one of the "older" disciplines, the reader may note that the faculty mix

percentage is lower at the professor rank than at the assistant professor rank in the public studies; 0.24 vs. 0.41 (1982-83) respectively; and 0.23 vs. 0.34 (1985-86) respectively. The faculty mix percentage at the ranks of professor and assistant professor in ALL MAJOR FIELDS for both public studies is as follows: 0.33 vs. 0.27 (1982-83) and 0.36 vs. 0.26 (1985-86) respectively. In other words ALL MAJOR FIELDS has a higher percentage of professors and a lower percentage of assistant professors than the secretarial and related programs in both public studies.

Finally, the hiring rate of new assistant professor in the secretarial and related programs in the public studies is lower than that of ALL MAJOR FIELDS both in 1982-83, 2.6 percent (5/194) vs. 3.6 percent (1,268/35,137) respectively; and in 1985-86, 2.7 percent (7/262) vs. 3.9 percent (1,541/39,815), respectively. In other words the hiring rate in the discipline/major field of secretarial and related programs was less in both public studies.

RESULTS OF THE TWO PRIVATE STUDIES, 1982-83 AND 1985-86

In the PRIVATE 1982-83 salary study in the above table, the reader may note that the discipline/major field of secretarial and related programs was reported in 20 of the 193 private institutions. The average salary of the 49 faculty was $17,656. This average salary was approximately 30 percent (0.70) lower than the average salary of $25,213 for all 15,823 faculty in ALL MAJOR FIELDS in the 1982-83 private study.

In the PRIVATE 1985-86 salary study in the above table, the discipline/major field of secretarial and related programs was reported in 22 of the same 193 private institutions. The average salary of the 46 faculty was $23,040. This average salary was approximately 23 percent (0.77) lower than the average

salary of $29,850 for all 17,299 faculty in ALL MAJOR FIELDS in the 1985-86 private study.

The increase in average salaries for all faculty in the secretarial and related programs after three years in the private institutions studied was 30.5 percent ($23,040 minus $17,656 equals $5,384). The CPI of increased cost-of-living between October 1982 and October 1985 was 10.7 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 19.8 percent or 6.6 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the private institutions studied was 18.4 percent ($29,850 minus $25,213 equals $4,637). In comparison to the discipline/major field of secretarial and related programs (30.5%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 12.1% percent (30.5% minus 18.4% equals 2.7%) less than faculty in the discipline/major field of secretarial and related programs.

Even though the discipline/major field of secretarial and related programs is one of the "older" disciplines, the reader may note that the faculty mix percentage is much lower at the professor rank than the assistant professor rank in the private studies: 0.06 vs. 0.49 (1982-83) respectively; and 0.07 vs. 0.45 (1985-86) respectively. The faculty mix percentage for ALL MAJOR FIELDS for both private studies is as follows: 0.28 vs. 0.33 (1982-83) respectively; and 0.30 vs. 0.31 (1985-86) respectively. Compared to ALL MAJOR FIELDS, the secretarial and related programs have a much lower percentage of professors and a higher percentage of assistant professors in both private studies.

Finally, the reader may note that no new assistant professors were hired in either the 1982-83 private study or the 1985-86 private study. The hiring rate of new assistant professor in ALL MAJOR FIELDS is as follows: in 1982-83, 4.7 percent (739/15,823); and in 1985-86, 4.9 percent (843/17,299) respectively.

CONCLUDING REMARKS

This article presented salary-trend information on the academic discipline/major field of secretarial and related programs and compared that information with 40 other academic disciplines/major fields over a period of three years: the "baseline year" of 1982-83 and the "trend year" of 1985-86. Two studies, one for public (AASCU) institutions, and the other for private institutions were conducted for the baseline year and for the trend year--a total of four studies. A total of 551 faculty in the discipline/major field of secretarial and related programs participated and were included in the overall total of 108,074 faculty in all 41 disciplines/major fields in all four studies. The same 174 public (AASCU) institutions and the same 193 private institutions in the United States participated in the baseline year and the trend year.

Although many interpolations and extrapolations of the data may be made, a few of the more important ones are as follows. First, the average faculty salary in the discipline/major field of secretarial and related programs is currently (1985-86) about 9 percent in the public study and 23 percent in the private study, below overall average faculty salary of the other 40 discipline/major fields. The average faculty salary in the private institutions lagged behind the public institutions for both the study years. This was due in part to the low number of full professors found in the private institutions, compared to the public institutions, both in 1982-83 and 1985-86. A reason for the low number of full professors may be because the discipline/major field of secretarial and related programs seems to be phasing out.

Second, the CPI of October 1985, in comparison to the CPI of October 1982, indicates that the faculty in the secretarial and related programs in both the public and private institutions, received overall salary increases for three years above the cost-of-living. Secretarial and related programs average

faculty salary increase in the public institutions was less than for faculty in ALL MAJOR FIELDS during this same period by about 2 percent, however the increase in the private institutions was greater than for ALL MAJOR FIELDS by about 12.1 percent. Secretarial and related programs faculty both in the public and private institutions are lagging behind ALL MAJOR FIELDS in average salary, and the public faculty are being paid more than their colleagues in the private institutions .

Third, the discipline/major field of secretarial and related programs is one of the older disciplines. There is a small number of full professors compared to assistant professors because this discipline/major field is being phased out. In other words, few promotions are being given causing a conglomeration of faculty in the assistant rank. Also few new assistant professors are being hired in the public institutions, while none are being hired in the private institutions.

Now that a rather significant data base on individual faculty member salaries has been developed, it is anticipated that additional salary-trend studies will be effected in the secretarial and related programs, and in other disciplines/major fields, on an annual basis.

Richard D. Howe is the originator and director of the annual CUPA faculty salary studies. He is a professor of leadership and higher education, and history at Appalachian State University, Boone, North Carolina. Sidney W. Eckert is professor of business education at Appalachian State University.
